

Ecological Mitigation.
 Bat and bird boxes will be included within the structure of each house. A total of 36 Schwieglar Type 24 swift bricks (32 mm hole) will be installed within the new walls on the north or east elevation walls at least 3-4 metres above ground to avoid disturbance (spilt between each property as the elevations permit). These boxes are multi-purpose and can be used by house sparrows, blue tits etc as well as swifts and other species.

Each building will have a Vivara Pro Build-in WoodStone Bat Box installed into the wall on the south or west facing elevation. Each box will be installed high up and out of reach either below a ridge or just below the eaves as well as design/elevations permit - eighteen should be installed in total.
